Problem	Solution	Impact
Not every order that comes in is a good order. Some are priced too low, some are discounted beyond what the margin can absorb. But without a live signal, there was no way to know until the invoice had already gone out. By the time the issue surfaced, it was too late to do anything about it.	I built a Power Automate flow triggered by a Microsoft Form that replicates how a rep submits a new order. The moment the form is submitted, the flow checks the margin. If it falls below 15%, an alert email fires immediately to management. The form captures everything relevant Order ID, Customer, Rep, Product, Margin % and Discount %, so the alert email arrives with full context, not just a number.	Management is notified the moment a margin breach happens. The rep's order details are right there in the email, so the conversation can happen before the invoice goes out. In the test dataset, 14 out of 51 orders fell below the 15% threshold meaning 27% of orders would have triggered an alert. In a live environment, catching even one below cost order before invoicing protects thousands in margin every week.

How It Works

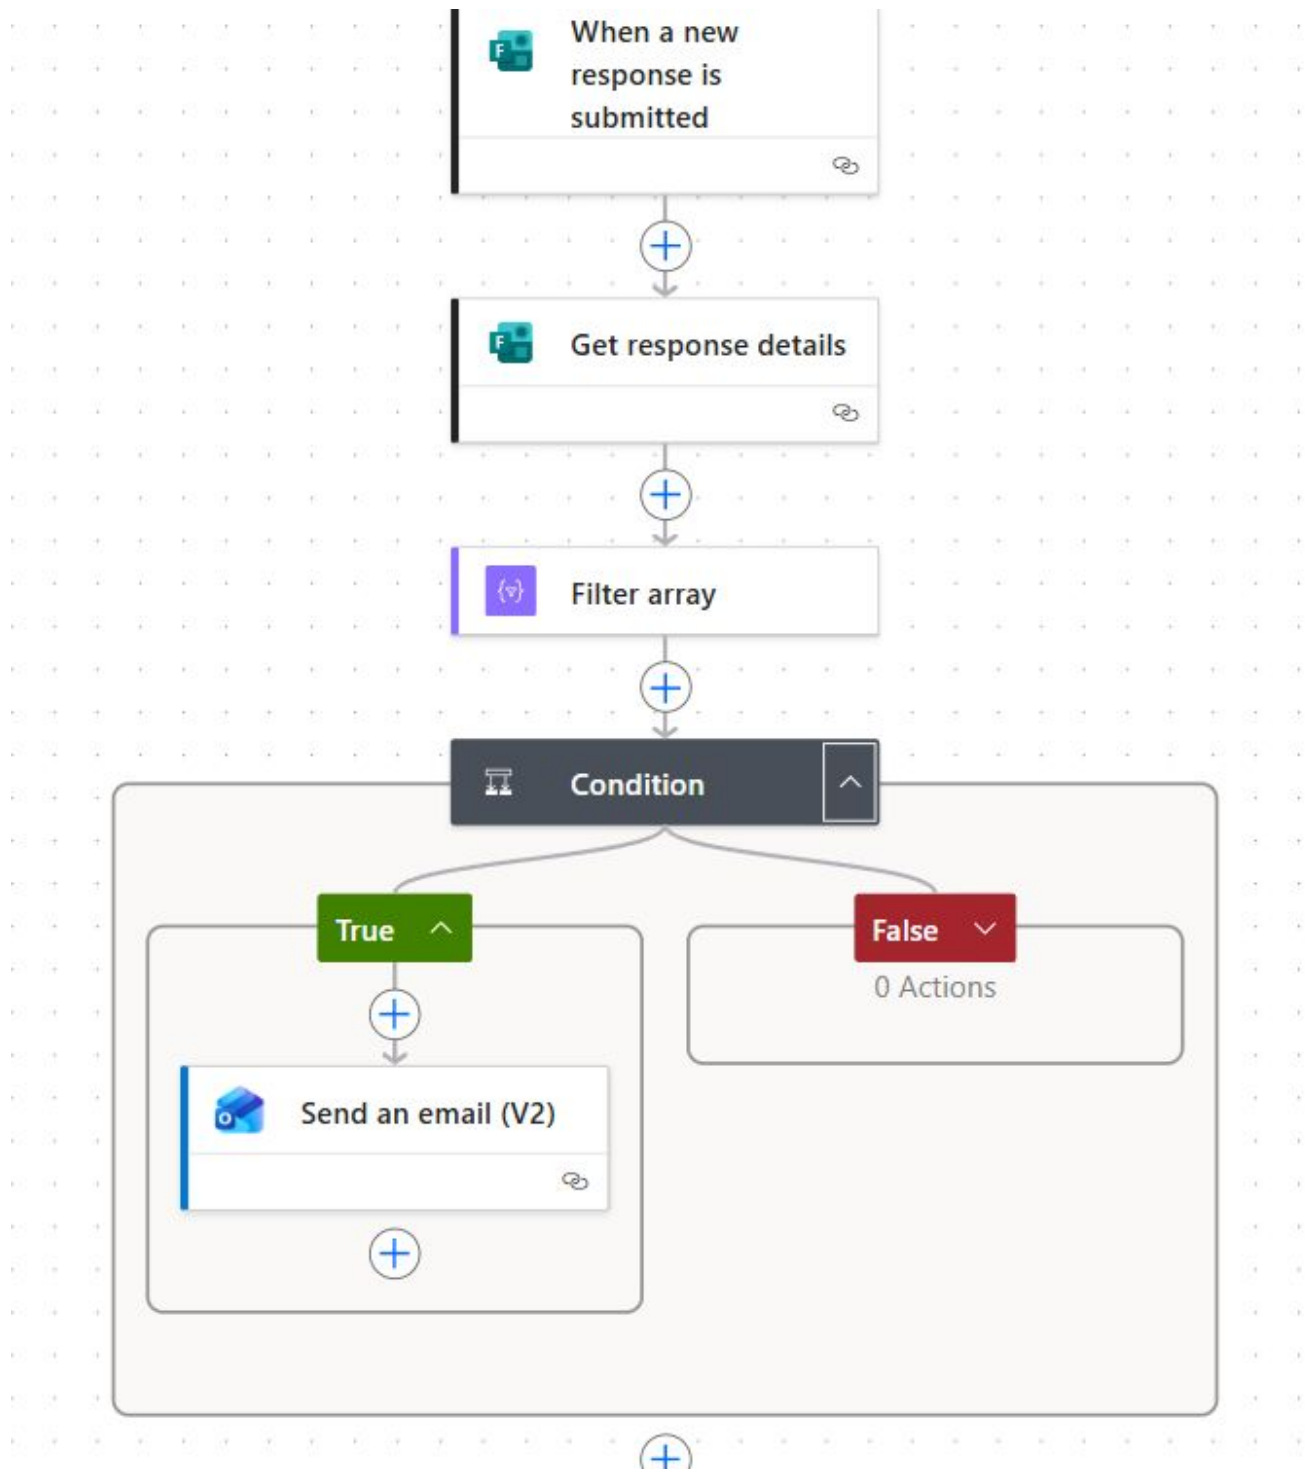

- Rep submits new order via Microsoft Forms
- Flow triggers instantly on submission
- Filter checks if Margin % is below 15%
- If yes, alert email sent to management immediately
- If no, flow ends silently, no unnecessary noise
- **Threshold:** 15% chosen deliberately to avoid alert fatigue

Before This Automation	After This Automation
• No real-time visibility of margin on individual orders. • High-discount and below cost orders processed with no review. • Management only found out about margin breaches at month end.	• Instant alert fires the moment an order is submitted below 15% margin. • Full order details land in management's inbox before the deal is invoiced. • Zero manual monitoring required saving hours of end of month review time.

The Flow At a Glance

The Automation

Power Automate flow triggered instantly on form submission, checks margin threshold and fires alert within seconds.

Tue, Apr 28, 2026 at 11:59 PM

URGENT — Low Margin Order Detected

An order has been submitted below 15% margin. Immediate review required.

Field	Detail
Order ID	ORD058
Customer	Peak District Homes
Rep	Claire Sutton
Product	Recticel Eurothane 80mm
Margin %	6
Discount %	25
Action Required	Commercial Manager to review immediately

This is an automated urgent alert from the Sales Operations flow.

Instant alert email delivered to management, full order details included so action can be taken before invoicing.

Built & Tested Independently

Built using Microsoft 365, replicating the order entry process I recognised from working in internal sales, where high-discount orders were only ever noticed after the fact. Microsoft Forms acts as a stand-in for ERP order entry. All data is representative and contains no real customer or business information.
